

Guide for Aniline-type Leathers

1. This guide is for KELVIN GIORMANI sofa users to deal with normal household stains on aniline-type leathers. In KELVIN GIORMANI genuine leather collection, our aniline-type leathers include HERITAGE, KLAR and MIMOSA. They can be treated in the same way, and the following demonstration is done with MIMOSA.

2. The cleaning kit that we recommend for aniline-type leathers is THE COMPLETE NUBUCK CARE SET from “RENZO”, made in Italy. Although it was primary meant for nubuck-type leathers; in KELVIN GIORMANI, we have experienced a satisfactory result with it when it comes to dealing with normal household stains on aniline-type leathers.

Guide for Aniline-type Leathers

3. Like other leather-care kits that are provided to household consumers by virtually all sofa brands, this RENZO CARE SET is meant for making normal household stains less visible on leather surface but not for completely removing them; nevertheless, the earlier the stains are dealt with, the better the stain removal results are.
4. For normal household stains from, such as, coffee, wine, sauce or grease, etc., they shall be first wiped dry from the leather surface before applying the RENZO CARE SET.

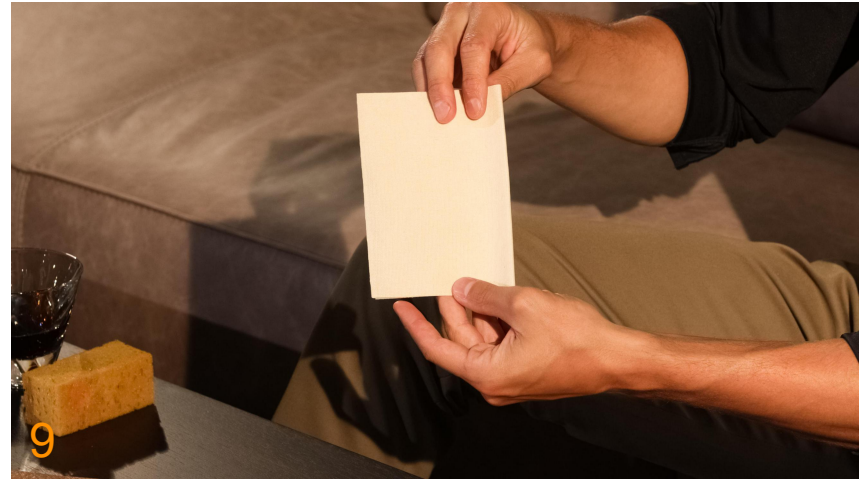

Guide for Aniline-type Leathers

5. Right after the target stain is dried, the CLEANER shall be applied next.
6. Pour a small amount of CLEANER onto the small foam sponge.
7. Gently squeeze the foam sponge to transform the CLEANER from the liquid to the foam form.
8. Wipe the stain off (preferably in a circular motion) with the foam sponge and repeat the “wipe-off” process till the target stain becomes less visible.

Guide for Aniline-type Leathers

9. Pick up the dry-cloth from the CARE KIT.
10. Next, use it to absorb the moisture or stain residues on the leather surface by gentle hand-pressing on the treated area of the leather. Please DO NOT apply strong wiping or rubbing motion at this stage. Then, you can let the leather dry naturally.
11. For the faster drying purpose, blow some warm air with a hair-drier is an option. Please DO NOT use hot air or position the hair-drier too closely to the leather surface.

Guide for Aniline-type Leathers

12. Before the treated area is completely dried, the PROTECTOR can be applied.
13. Spray a small amount of PROTECTOR (about 30cm away from the leather); then, let it be absorbed and dried naturally. It will take at least an hour.
14. Since stains cannot be removed completely from aniline-type leathers with regular household leather-care kit, it's possible that the original stains are still vaguely visible after the cleaning and caring process is done.
